PREFACE

1997 was the first full year with the new professor team (Laakso started 1.7.1996, Kantola 1.9.96, and Virtamo 1.1.97). Strategies were written, teaching was co-ordinated together with the Communications laboratory and weekly meeting routines were established. In addition to professors, also the research and teaching personnel has kept growing steadily. 11 new members of staff joined the laboratory in 1997, which has kept the laboratory fresh and active.

In this rapidly changing world, the traditions have also been remembered. Laboratory of Telecommunications Technology is one of the oldest in the department, founded in 1943. The rich traditions have accumulated lots of equipment in the storage spaces, and all this was carefully inventoried by members of the Telesenior Club, consisting of old students of the laboratory. Based on this inventory, part of the equipment were decided to be kept in the laboratory, whereas other devices were donated to the Finnish Museum of Technology in Helsinki and the Military Communications Museum in Riihimäki.

The inventory and relocation of the old equipment has paved the way to a new teaching laboratory. A Master's Thesis was completed about how the laboratory teaching has developed in the past 50 years and what should be taught in the future. Based on the conclusions of the thesis, plans were devised and the new laboratory with new desks and up-to-date equipment is currently in the making.

In 1997, contacts to the telecommunication industry were by visits to several companies, including Helsinki Telephone Company Research Center, Finnish Telecom, Nokia Research Center, and Finnish Broadcasting Corporation. The round will continue in 1998. We are grateful for the support of the companies and hope that good cooperation will continue in future years.

Timo Laakso

1. INTRODUCTION

As described in the preface, the first study year of the new team is over and the laboratory is settling in to a more stable phase of development.

1.1 General

The re-modelling of the laboratory premises has continued. The combined library-kitchen-meeting room was implemented already in the fall of 1996, and it has been followed by reshaping office space to fit more people more comfortably - the lack of office space is a constant problem in the department. The new teaching laboratory is currently being constructed.

The past, present, and future of the broadband networks and their traffic theory were revealed by Jorma Virtamo's inauguration lecture in April 22, 1997, entitled 'The challenges of the traffic management of broadband networks'.

1.2 Research

The research has been growing in 3 main directions: ATM networks and their traffic theory, signal processing for mobile communications, and Internet-based switching and speech transmission. Research contacts have been active both to Finnish and foreign colleagues. Two visiting researchers, David Vazquez from Universidad de La Coruna and Jose Apolinario from the Federal University of Rio de Janeiro spent several months with us in cooperative projects.

1.3 Teaching

Several new important steps have been taken in the development of the teaching. The co-ordination of the curriculum between us and the Laboratory of Communications was implemented in the Study Programme of 1997-98, with the introduction of 5 main study paths the courses of which are produced in co-operation. The work continues on redesigning the basic studies to better meet the needs of a modern communication engineer.

A new position, Specialist teacher, was created to better enable high-quality teaching in the basic communications courses offered by the laboratory. A long-time member of the staff, Lic. Tech. Seppo Uusitupa was appointed in the post.

A new studia generalia type course, Telecom Forum was established by Raimo Kantola where leading experts of the industry gave lectures of their vision of the future of the communication business and technology. The course was a great success not only among the students but also university personnel and participants from the industry.

Professors Paulo Diniz and Mariane Petraglia from the Federal University of Rio de Janeiro gave a 2-week course on adaptive digital filters which was organized together with the Laboratory of Signal Processing and Computer Technology and the GETA Graduate School. More than 30 persons attended and passed the course.

2. PERSONNEL

2.1 Laboratory staff

Laakso, Timo   Dr.Tech., professor, head of laboratory
Kantola, Raimo   Dr.Tech., acting professor
Virtamo, Jorma   Dr.Tech., professor
Rahko, Kauko   Dr.Tech., professor emeritus
Pirinen, Aulis   Dr.Phil., docent

Aalto, Samuli   Ph.Lic., research scientist
Apolinario, Jose   M.Sc., visiting research scientist
Baghaie, Ramin   Lic. Tech. (PhD), senior assistant
Betlehem, Ulf   Research assistant
Brax, Veikko   M.Sc., research scientist
Erke, Tapio   On sabbatical
Hyytiä, Esa   Research assistant
Hänninen, Arja   Department secretary
Ilvesmäki, Mika   M.Sc., research scientist
Karttunen, Petri   M.Sc., research scientist
Kyläkoski, Kaisa   Research assistant
Lassila, Pasi   M.Sc., research scientist
Lindgren, Birgit   Secretary
Luoma, Marko   M.Sc., research scientist
Nupponen, Esko   Senior laboratory supervisor
Nurmi, Jukka   M.Sc., research scientist
Peräläinen, Ilkka   M.Sc., Research scientist
Peuhkuri, Markus   M.Sc., Research scientist
Uusitupa, Seppo   Lic. Tech. (PhD), senior engineer
Voipio, Kirsi   Student adviser
Werner, Stefan   Research assistant
Xie, Dazhao   Research assistant
Yletyinen, Tomi   Research assistant

S-38.212 Signaalinkäsittely tietoliikenteessä II: Ranta, Jukka

3. RESEARCH PROJECTS

3.1 Models for Integrated Telecommunication network Traffic and Architecture (MITTA)

Project leader: Rahko, Kauko
Other researchers: Luoma, Marko; Kankare, Janne; Peuhkuri, Markus

In this project we are concentrating on issues of traffic measurement. And management. Our starting point has been high speed networks (ATM) and problems which they have brought to management of traffic streams. Our assumption has been that 'old fashion' analytical modelling of traffic and sources has reached it's limits and new more novel approaches should be used. Our aim is to find out which are the key factors in the effective traffic management and how they should be adjusted in order to minimise the load of the traffic management. We try to solve problems by using real time measurements and predict what is the traffic distribution by using an estimation from the measured traffic stream. This research is done through the simulations using a commercial and a self made tools. Instrumented version of Linux-kernel which we produced as a tool for analysing effects of OS-processes to network traffic is distributed from web-pages *http://keskus.hut.fi/tutkimus/mitta/abstract.shtml*

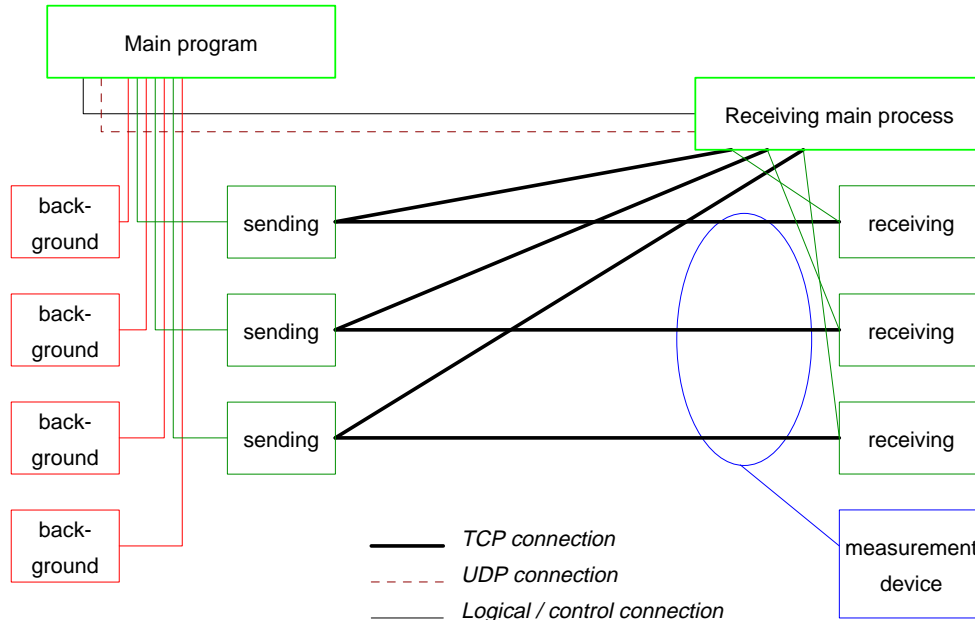

Figure 2 Instrumented kernel measurement system

3.2 Signal processing in digital receivers

Project leader: Laakso, Timo
Other researchers: Xie, Dazhao

In this project pulse shaping digital filter design especially for digital subscriber line applications was investigated. Based on the minimum mean-squared-error criterion, a general iterative technique for simultaneous optimisation of transmit and receive filters was developed, assuming a general linear channel, coloured noise and co-channel (cross-talk) interference with a known power spectrum. The new technique can provide several decibels of better noise and interference attenuation than the standard root-raised-cosine filters.

3.3 Smart antennas in new radio systems

Project leader: Laakso, Timo
Other researchers: Baghaie, Ramin; Karttunen, Petri; Werner, Stefan

Figure 3   Mobile communication system

In this project, digital signal processing for smart antennas is investigated. The main focus is on CDMA systems provided with multiple antennas. The work has been divided into 3 subprojects. Petri Karttunen has investigated the simultaneous tracking of multiple users with an adaptive beamformer with an adaptive step size algorithm which finds a good compromise between tracking speed and misadjustment noise. Stefan Werner has studied blind adaptive interference cancellation at the mobile CDMA receiver and showed that the use of multiple antennas can speed up the convergence of the adaptation. Ramin Baghaie has investigated efficient implementation of adaptive algorithms using pipelining and transformation techniques. The visiting researcher Jose Apolinario from Federal University of Rio de Janeiro took part in the development of the adaptive algorithms for mobile reception.

3.4 COST 257

Project leader: Virtamo, Jorma
Other researchers: Aalto, Samuli; Lassila, Pasi; Hyytiä, Esa; Kyläkoski, Kaisa

COST 257 is a joint project between the Laboratory of Telecommunications Technology at HUT and VTT Information Technology. It represents the Finnish contribution to the European COST 257 Action, in which laboratories and research institutes from 18 countries participate. At HUT, the project was started in January 1997. The research is mainly funded by TEKES with the support by Nokia Telecommunications and Telecom Finland. The research focuses on developing models and methods for the performance analysis of telecommunication systems. Five problem areas have been addressed:

1) Effective simulation of multiservice loss systems (such as an ATM network considered at the call level). A new method based on the use of Gibbs sampling with an enhanced data collection techniques has been developed. A significant variance reduction was obtained in the test cases.
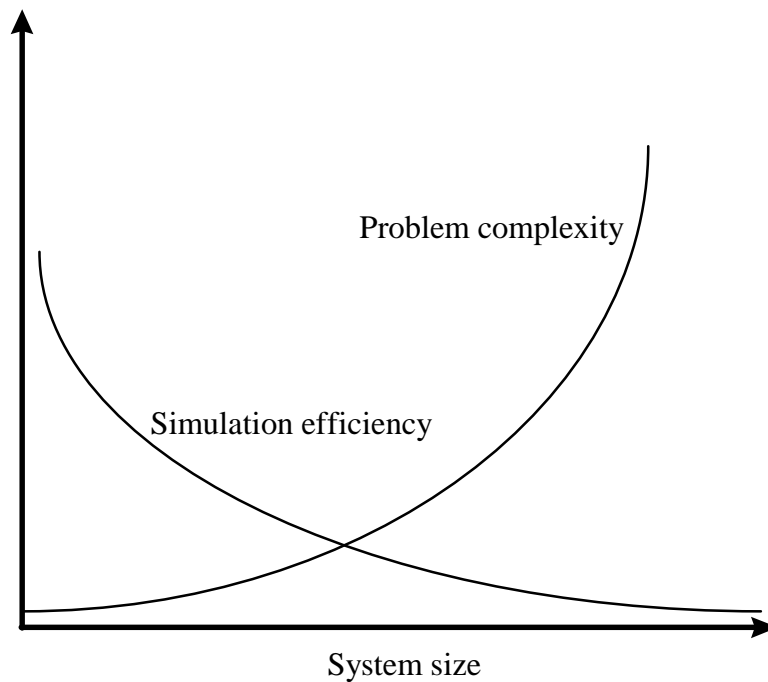

Figure 4 The simulation problem

2) Optimal routing and wavelength assignment in all optical WDM backbone networks. Optimal wavelength assignment is equivalent to the so called graph colouring problem. The basic theory of this problem has been reviewed and several heuristic techniques for finding "good" solutions for the problem have been implemented. Benchmark tests have been made in order to evaluate their effectiveness and computational complexity.

3) Proxy cache algorithms. Caching is an important means for reducing latency times and network costs of www requests. Different modelling approaches for analysing the behaviour of a cache have been studied with the aim of developing algorithms that would improve the cache performance.

4) Resource allocation. Computational methods have been developed for the transient blocking problem whose solution is needed in the optimal VP capacity allocation in ATM networks.

5) Multicast traffic. A generalised Engset model has been applied for calculating the end-to-end blocking probabilities of calls dynamically joining or leaving multicast trees. This work has been done jointly with the Laboratory of Telecommunication Software and Multimedia.

3.5 *Studies in queuing theory*

Project leader: Aalto, Samuli

This study aims at Ph.D. Thesis in Queueing Theory. It consists of two separate parts. In Part I optimal control problems of various batch service queueing systems are

considered, focusing on the case of finite service capacity. The models of this kind have natural applications in the area of transportation systems. In Part II the aim is to characterize the output process of some fluid flow storage models used in the teletraffic theory as burst scale models of multiplexers.

3.6 IP/Voice

Project leader: Kantola, Raimo
Other researcher: Yletyinen, Tomi; Betlehem, Ulf; Nurmi, Jukka

Voice over IP studies the transmission, switching and routing of voice in IP networks and service interoperability of such networks with PSTN/ISDN. The project was initiated in April 1997 and is planned to continue for 3 years. The project is mainly funded by a TEKES grant, it has also four industrial partners (Nokia Research Center, Nokia Telecommunications, Telecom Finland and Omnitele/Helsinki Telephone Research).

Results for the first year include Tomi's M.Sc thesis on Quality of Voice over IP, contributions to ETSI/TIPHON -project on number portability and network scenarios and a presentation on Telecoms Voice & Data Switching conference in London. In addition internal reports and student papers were produced.

3.7 IP / Switch

Porject leader: Kantola, Raimo
Other researchers: Ilvesmäki, Mika; Peräläinen, Ilkka; Brax, Veikko

The project was initiated in April 1997 and is planned to continue for 3 years. The project is mainly funded by a TEKES grant, it has also five industrial partners (Nokia Research Center, Nokia Telecommunications, Telecom Finland, Omnitele/Helsinki Telephone Research and Tellabs).

Although viewed as the prototype of the future Information Superhighway, the current Internet technology has a number of drawbacks including: limited transmission and routing capacity and limited speed, long and variable transmission delays and no support for quality of service. The project is aimed at helping to solve some of these problems by focusing on issues of deployment of ATM to increase the performance of the Internet and to improve the quality of service available to the user.
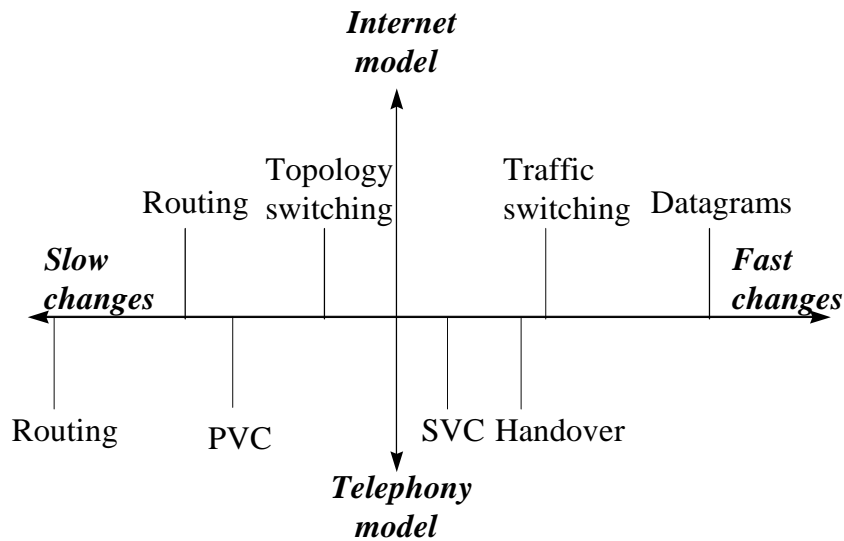

Figure 5 The integrating dimensions of the future Internet

For overcoming the switching capacity shortfall, it has been suggested that the Internet should be boosted by building its backbone using ATM technology and by using cut-through switching in addition to packet forwarding to increase the performance economically. The project studies the different approaches to multi-layer routing, the performance of these schemes and aims at suggesting improvements in the concepts. The project will also develop methodology in Internet traffic measurements and network planning.

Results of the first year include set-up of a IP-switching laboratory, building basic competence in this new research area. Three conference papers and several student reports were published. Several theses are under preparation.

4. TEACHING

4.1 Development of teaching

In the Fall 1997 a new post-graduate level studia generalia course Telecommunications Forum was introduced. The Forum deals with all the hot topics in Telecommunications and facilitates continuous exchange of ideas with the industry by inviting high level business and technology managers to deliver lectures on the development and strategy in Telecommunications. The Forum draw a wide audience of some 200 people and was a huge success.

During the year within the Telecommunications Area the laboratory continued development of course contents in order to achieve a better alignment of courses with the Communications laboratory. Collection of student feedback from all the courses has become a regular practice.

4.2 Courses

The laboratory has given education in 25 courses. The courses can be divided in 6 groups:

4.2.1 Basic courses for all students studying telecommunications

S-38.105 Principles in Communication Engineering (Tietoliikennetekniikan perusteet B)
S-38.118 Principles in Telecommunications Technology (Teletekniikan perusteet)

4.2.2 Courses concerning communications and networks

S-38.102 Principles in Electrical Communications (Sähköinen viestintä)
S-38.116 Information Technology (Teletietotekniikka)
S-38.188 Telecommunication Networks (Tietoliikenneverkot)
S-38.191 Corporate Networks (Televerkot yrityksissä)

4.2.3 Courses on switching and ATM

S-38.110 Telecommunication Switching Technology I (Tiedonvälitystekniikka I)
S-38.122 Telecommunication Switching Technology II (Tiedonvälitystekniikka II)
S-38.164 Broadband Switching Technology (Laajakaistainen välitystekniikka)
S-38.166 Programming of Telecommunication Switching Systems
        (Televälitysjärjestelmien ohjelmointi)

4.2.4 Courses on signal processing

S-38.211 Signal Processing in Telecommunications I
        (Signaalinkäsittely tietoliikenteessä I)
S-38.212 Signal Processing in Telecommunications II
        (Signaalinkäsittely tietoliikenteessä II)

4.2.5 Postgraduate courses

S-38.001 Telecommunications Forum (Telecommunications Forum)
S-38.130 Postgraduate Course in Telecommunications (Teletekniikan lisensiaattikurssi)
S-38.141 Teletraffic Theory (Teleliikenneteoria)
S-38.143 Queueing Theory (Jonoteoria)
S-38.200 Individual Course in Telecommunications (Teletekniikan yksilöllinen opintojakso)
S-38.201 Seminar Course in ATM and Multimedia (ATM- ja multimediaseminaari)
S-38.220 Licentiate Course in Signal Processing in Communications
        (Tietoliikenteen signaalinkäsittelyn lisensiaattikurssi)
S-38.350 Research Seminar on Telecommunications Technology
        (Teletekniikan tutkijaseminaari)

4.2.6 Other courses

S-38.123 Telecommunications Technology, laboratory course I
        (Teletekniikan laboratoriotyöt I)
S-38.126 Telecommunications Technology, special assignment I
        (Teletekniikan erikoistyö I)
S-38.127 Telecommunications Technology, special assignment II
        (Teletekniikan erikoistyö II)

S-38.300 Thesis Seminar on Telecommunications Technology
(Teletekniikan diplomityöseminaari)

4.3 Degrees

4.3.1 Licentiate of Technology

Pasi Salonen: A Unified Reference Architecture for Intelligent Network and Broadband Integrated Services Digital Network

In the future Intelligent Network (IN) Capability Set 3 (CS3), new capabilities and functions are required to support new services and deployment of service processing in Broadband Integrated Services Digital Network (B-ISDN). A unified IN/B-ISDN reference architecture can be used by the standardisation organisations to achieve the IN and B-ISDN integration within CS3 time frame. The objective of this Licentiate Thesis is to define a unified reference architecture for the Intelligent Network CS3 and B-ISDN CS3, and validate the obtained results.

5. ACTIVITIES

5.1 International conferences and meetings

- COST 257 Management Committee Meeting, Leidschendam, The Netherlands, January 22-23, 1997 (Virtamo)

- International Conference on Voice, Video and Data Communications 97. Dallas, Texas (Ilvesmäki, Luoma, Peuhkuri)

- International Conference on Telecommunications, April 2-5, 1997, Melbourne, Australia (Kankare)

- COST 257 Management Committee Meeting, Helsinki, May 27-28, 1997 (Aalto, Lassila, Luoma, Peuhkuri, Virtamo (chairman))

- ETSI meeting, May 20-25, 1997, Sophia Antipolis, France (Kantola)

- The 15th International Teletraffic Congress - ITC 15, June 22-27, 1997, Washington, DC (Virtamo)

- IEEE International Conference on Communications ICC`97, Montreal, Quebec, Canada, June 8-12, 1997 (Baghaie)

- ATM Year 97 conference, Santa Monica, California, June 23-27.1997 (Kantola)

- International Symposium on Information Theory, Ulm, Germany, June 29 - July 4, 1997. (Laakso)

- The Third IFIP WG6.3 Workshop on Performance of Communication Systems, August 20-22, 1997, Ghent (Virtamo)

- Inernational Symposium on Personal, Indoor and Mobile Radio Communications, PIMRC`97, Helsinki, Finland, Sept. 1-4, 1997 (Baghaie, Karttunen, Laakso, Werner)

- COST 257 Management Committee Meeting MC meeting, Dubrovnik, Croatia, September 22-23, 1997 (Lassila)

- IEEE Finnish Signal Processing Symposium, FINSIG`97, Pori, Finland, May 1997 (Baghaie, Karttunen)

- Telecom Voice & Data Switching, November 26-28, 1997, London (Kantola)

5.2 Foreign visitors in 1997

The following persons have visited the Laboratory of Telecommunications Technology during the year 1997:

- MSc Josè Apolinario from Universidade Federal do Rio de Janeiro, Brazil (from August to December)

- MSc David Vazquez Cortizo from Universidad de La Corunna, Facuctad de Informatica, Spain (from September to February 98)

- Professor Paulo Diniz from Universidade Federal do Rio de Janeiro, Brazil

- Professor Mariane Petraglia from Universidade Federal do Rio de Janeiro, Brazil in September

6. PARTICIPATION IN BOARDS AND COMMITTEES

6.1 University boards and committees

- **Timo Laakso**
    - Chairman of the Library Committee of the of the Department of Electrical and Communications Engineering
    - Member of the Course Evaluation Committee of the Department of Electrical and Communications Engineering

- **Jorma Virtamo**
    - Vice chairman of the Steering Committee of the International Centre

- **Raimo Kantola**
    - Vice chairman of the Telecommunications Institute (YVA)
    - Member of the Committee of public relations of the Department of Electrical and Communications Engineering
    - Chairman of the Fitness for Work Committee at the Department of Electrical and Communications Engineering
    - Member of Board of Otaverkko Oy, subsidiary of HUT

6.2 Other boards and committees

- **Timo Laakso**
    - Member of the Digital Signal Processing Technical Committee of the IEEE Circuits and Systems Society
    - Member of the editorial board of Applied Signal Processing (Journal by Springer Verlag)

- **Jorma Virtamo**
    - Vice chairman of the Management Committee of the Action COST 257 "Impacts of new services on the architecture and performance of broadband networks"
    - Member of the Technical Program Committee of the15th International Teletraffic Congress, ITC-15, Washington, D.C., USA, June 23-27, 1997
    - Member of the Program Committee of The International Conference "Performance of information and communications systems", PICS'98 to be held in Lund, May 25-28, 1998
    - Member of the Technical Program of the ITC sponsored seminar, "Teletraffic Theory as a Base for QoS: Monitoring, Evaluation, Decisions", to be held in St. Petersburg, June 1-7, 1998

- – Member of the Program Committee of the "Workshop on Modelling, Measuring and Quality of Service" to be held in the 7th Summer School on Telecommunications, August 7, 1998. Lappeenranta

- **Raimo Kantola**

  - – Member of the Broad-band Core Networks Group of the TEKES Telecommunications Technology Programme

- **Ramin Baghaie**

  - – Member of Technical Committee of IEEE Finnish Signal Processing Symposium, FINSIG`97, Pori, Finland, May 1997

  - – Vice-Chair of GETA course

6.3 Referee activities

- **Timo Laakso**

  - – External evaluator of the Lic. Tech. thesis by Mr. P. Ranta, HUT

  - – External evaluator of the Lic. Tech. thesis by Mr. Heikki Einola, HUT

  - – External evaluator of the Dr. Tech. thesis by Mr. Jari Iinatti, Oulu University

  - – External evaluator and opponent of the Dr. Tech. thesis by Mr. Markku Juntti, Oulu University

  - – Reviewer for the following scientific journals: IEEE Transactions on Signal Processing, IEEE Trans. on Circuits and Systems, IEEE Trans. on Communications, Signal Processing, Applied Signal Processing, Electronic Letters

- **Jorma Virtamo**

  - – External evaluator of the PhD thesis by Mr. N. Stol, Norwegian University of Science and Technology

  - – Opponent in the Ph.D. dissertation of Mr. N. Stol, Norwegian University of Science and Technology, Trondheim, March 19, 1997

  - – External evaluator of the PhD thesis by Mr. S. Manthorpe, Ècole Polytechnique Fédérale de Lausanne (EPFL)

  - – Member of the jury in the Ph.D. dissertation of Mr. S. Manthorpe, Ècole Polytechnique Fédérale de Lausanne (EPFL), Lausanne, June 3, 1997

  - – External evaluator of the PhD thesis by Mr. M. Grundström, Tampere University of Technology, Tampere

  - – External evaluator of the Tech.Lic. thesis by Mr. Shaoji Ni

  - – Evaluation of Dr. J. Jormakka for the position of docent, Helsinki University of Technology

- **Raimo Kantola**
  - External evaluator of the PhD thesis by Mr. H. Kari, Helsinki University of Technology
  - External evaluator of the Tech.Lic. thesis by Mr. J. Häkämies, HUT
  - External evaluator of the Tech.Lic. thesis by Mr. M. Loukola, HUT
