Mobile Switching Systems Unit, L M Ericsson in Finland

Outline

- Background
- New network architecture
- Media gateway
- Standardization
- Summary

Background

Liberalization

Global
customers

IP &
Internet

Competition

Price pressure

Fixed <> Mobile

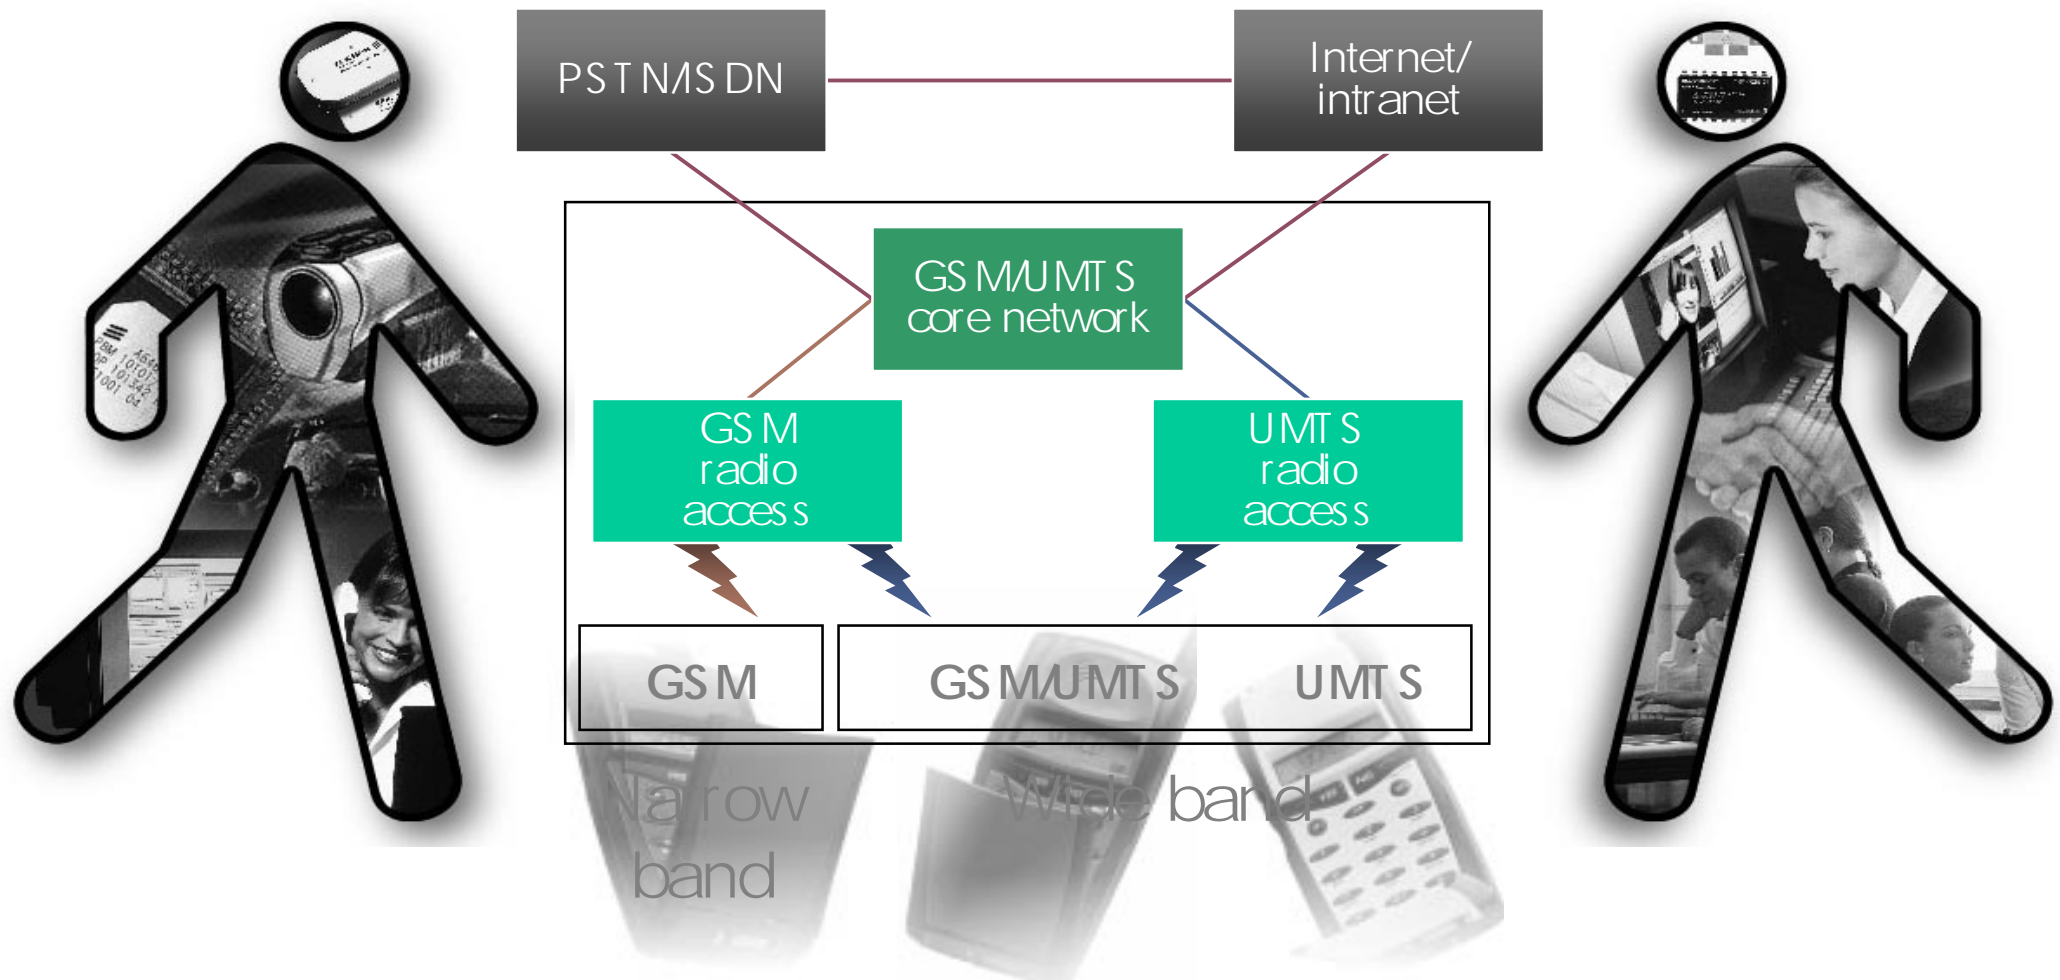

Technologies

Wireless Internet Services

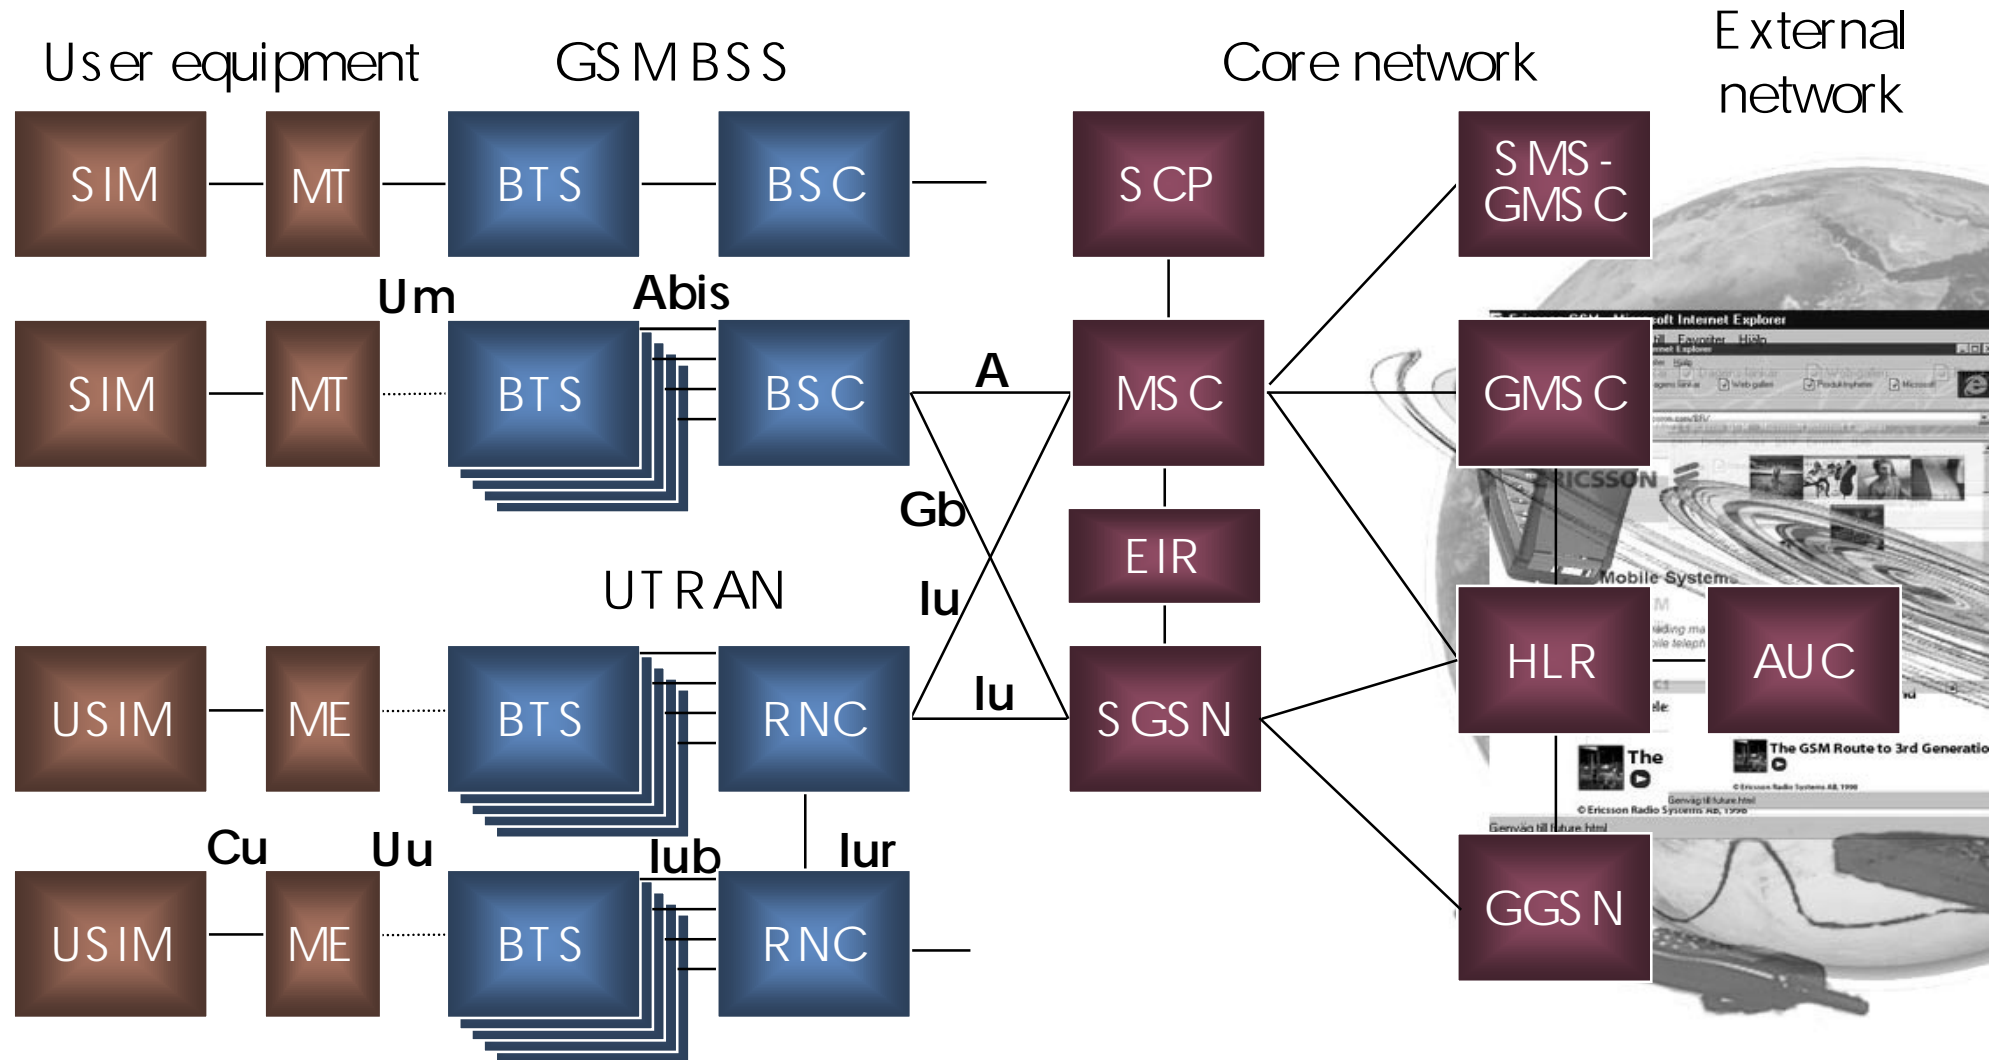

- News, weather, sports
- Traffic information
- Directory services
- Time tables
- Location-dependant information services, like “find a nearby restaurant”

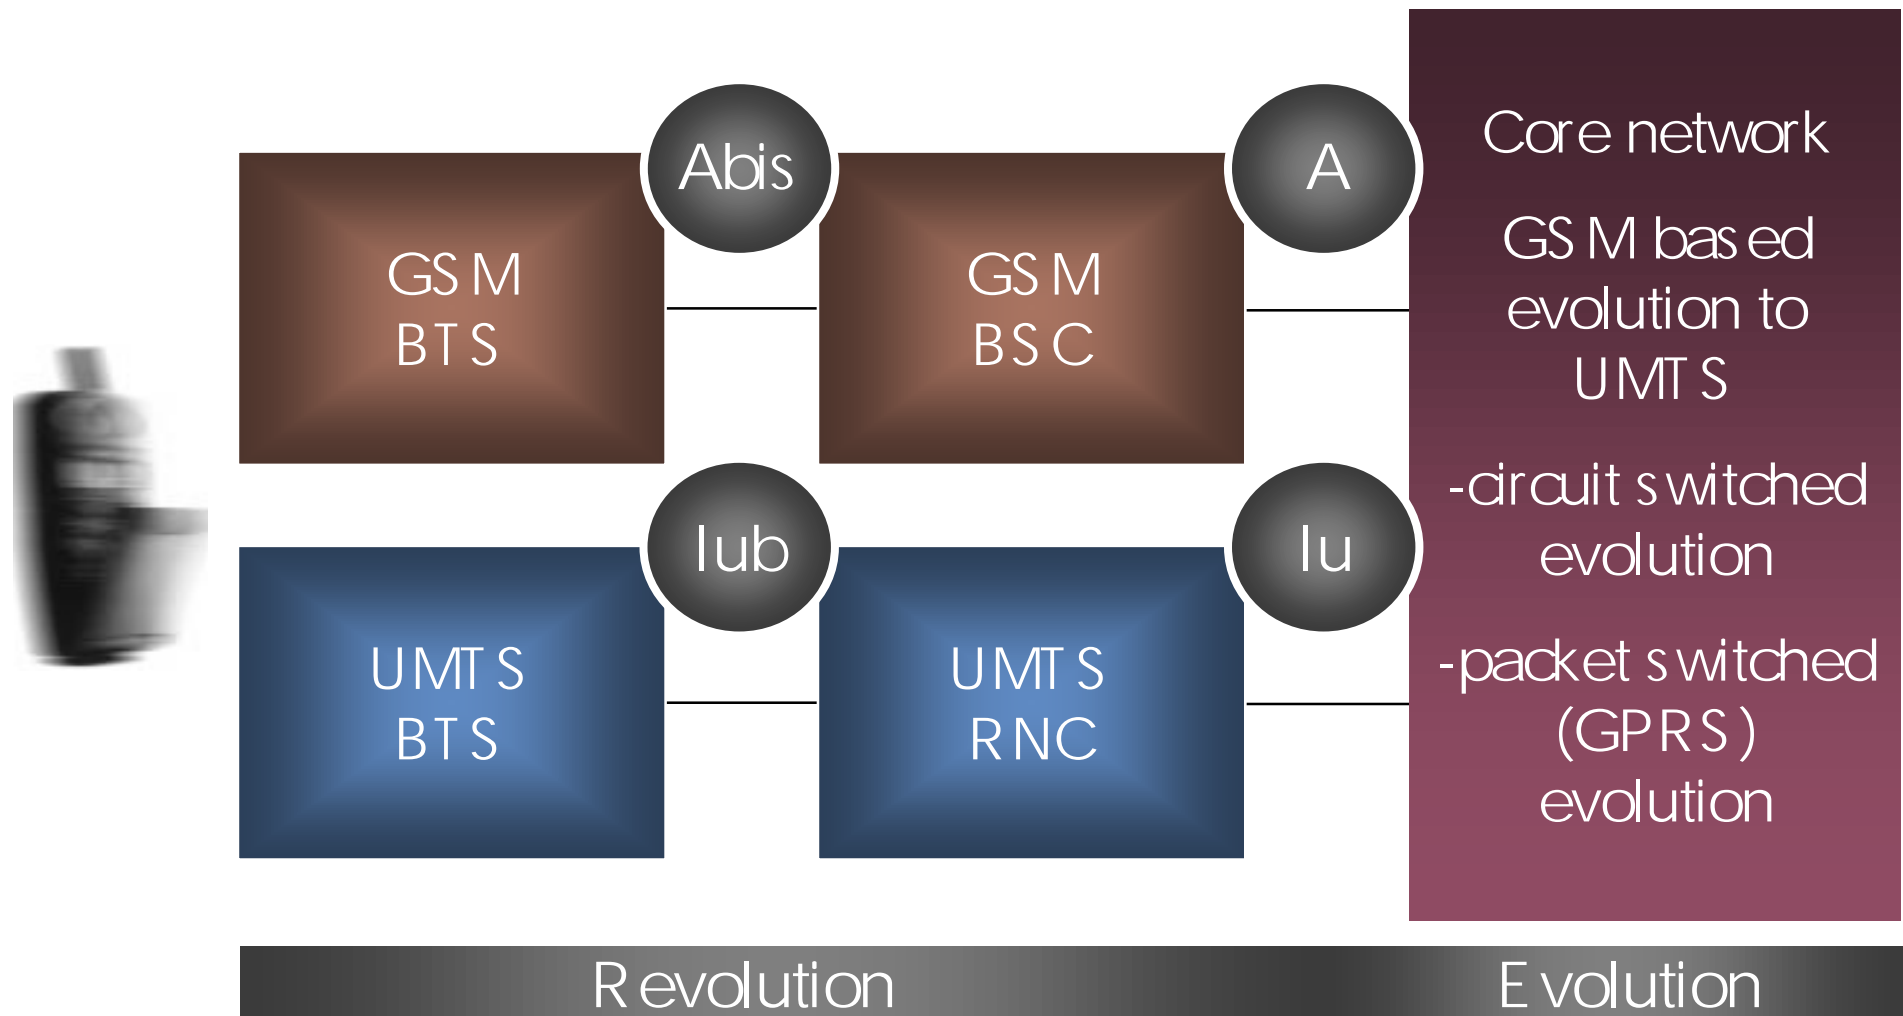

GSM/UMTS Network (Phase 1)

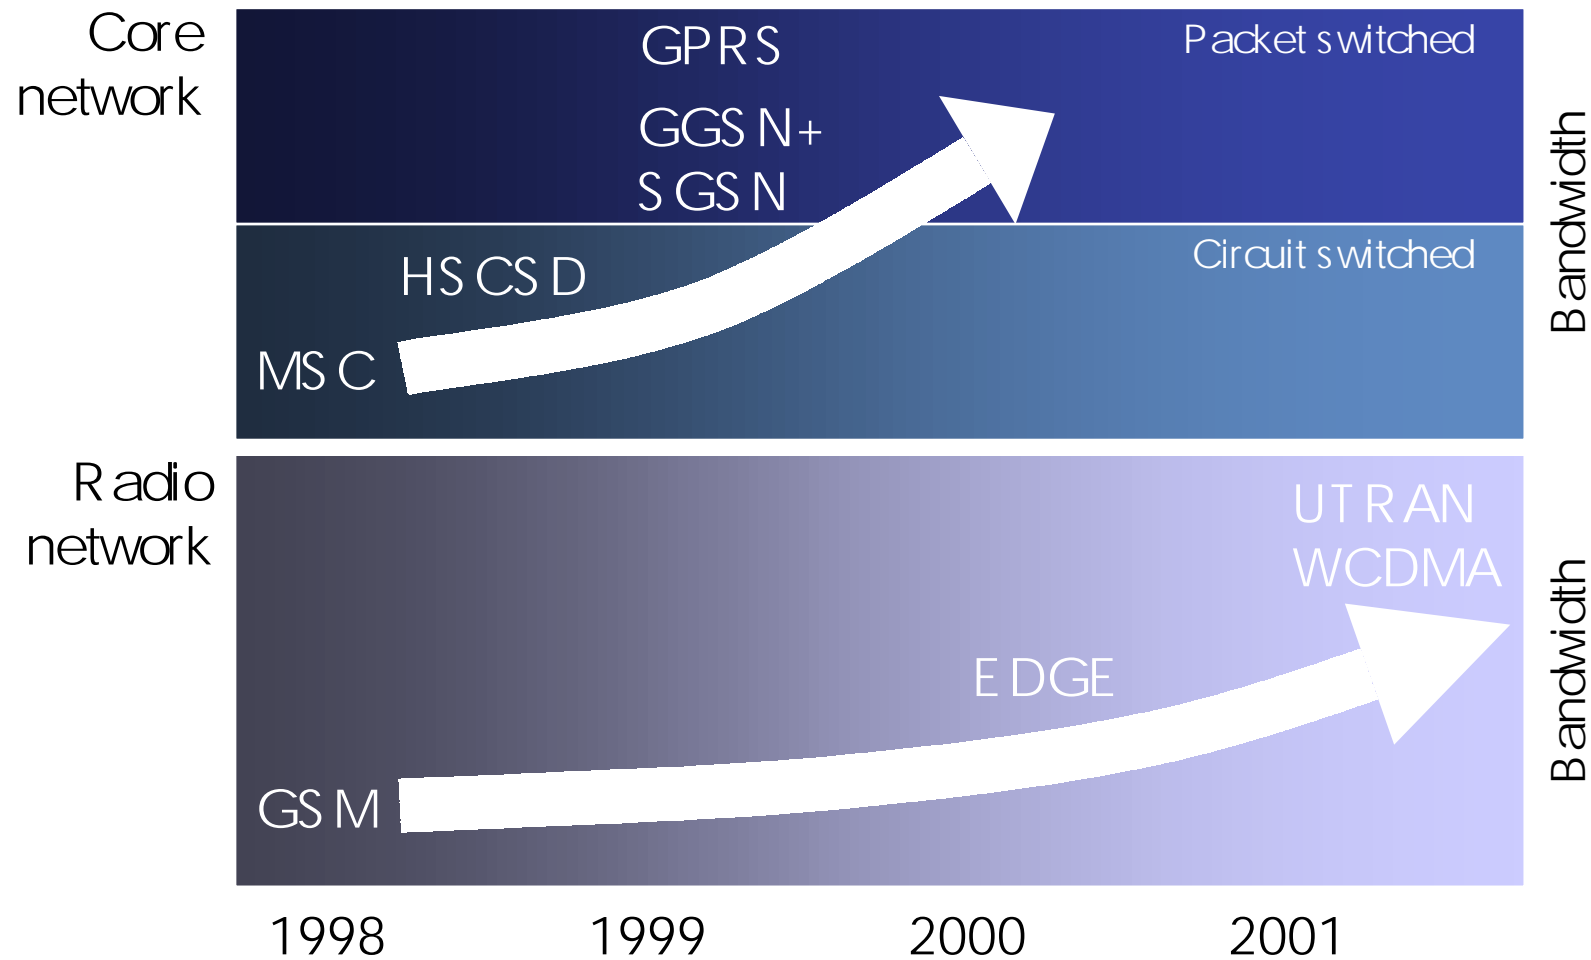

UMTS/GSM Reference Model

UMTS Standardization

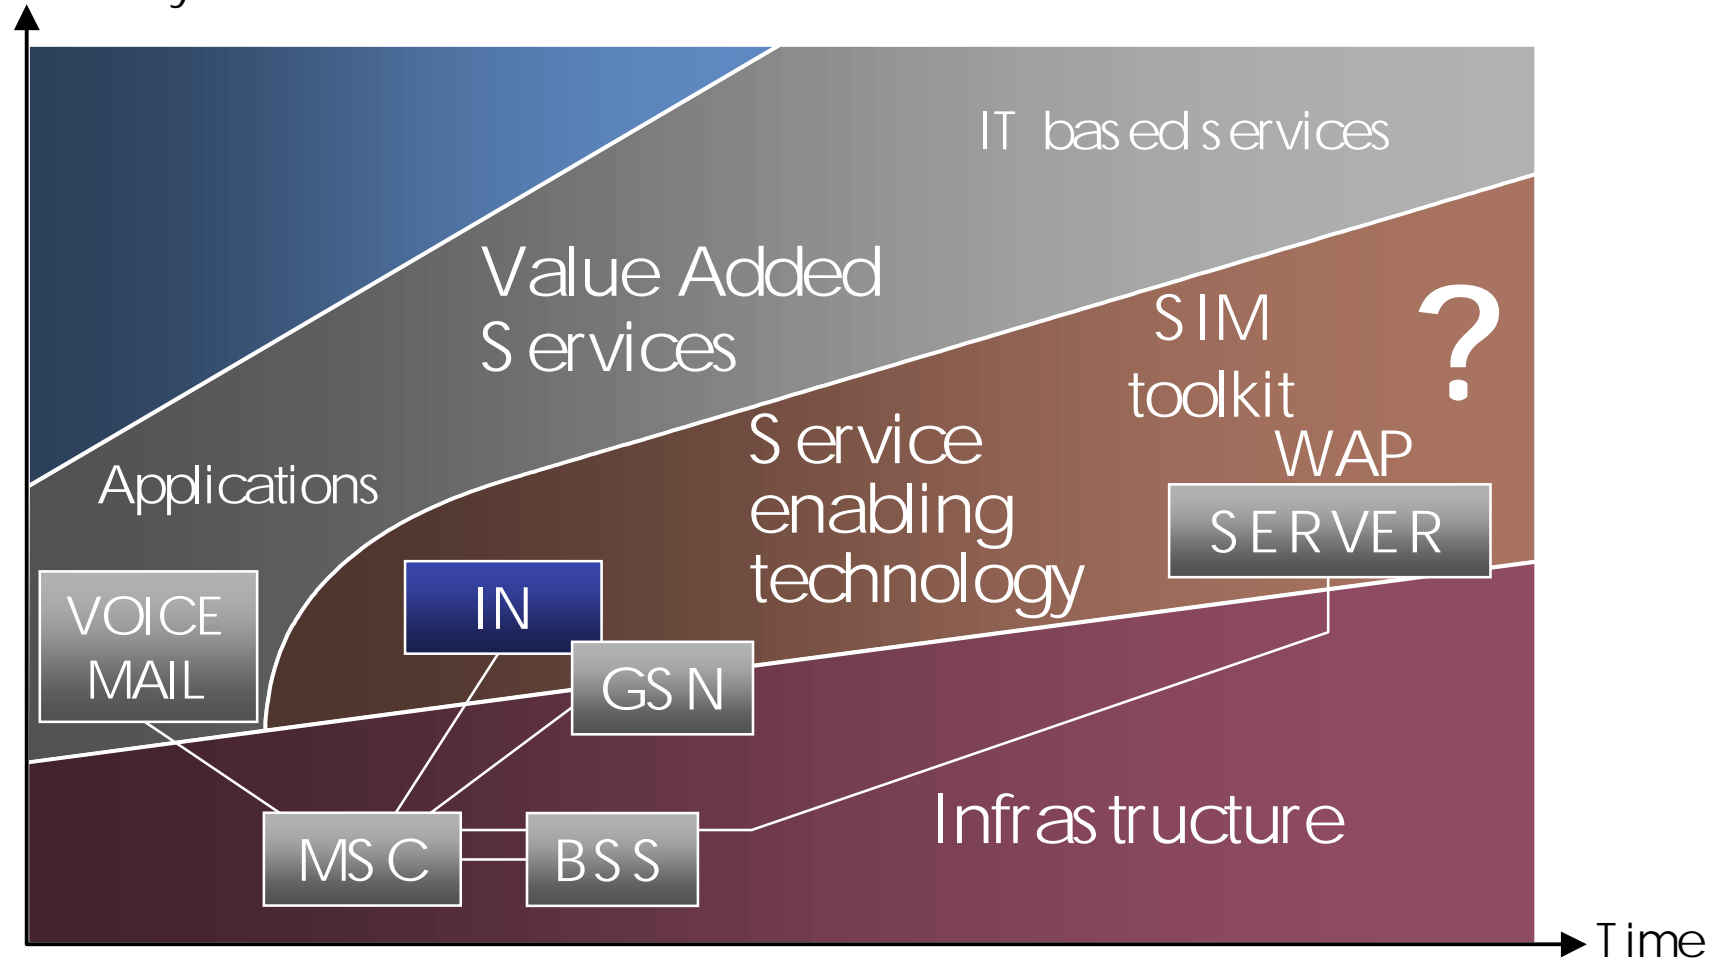

Migration Roadmap

Service Production

Functionality

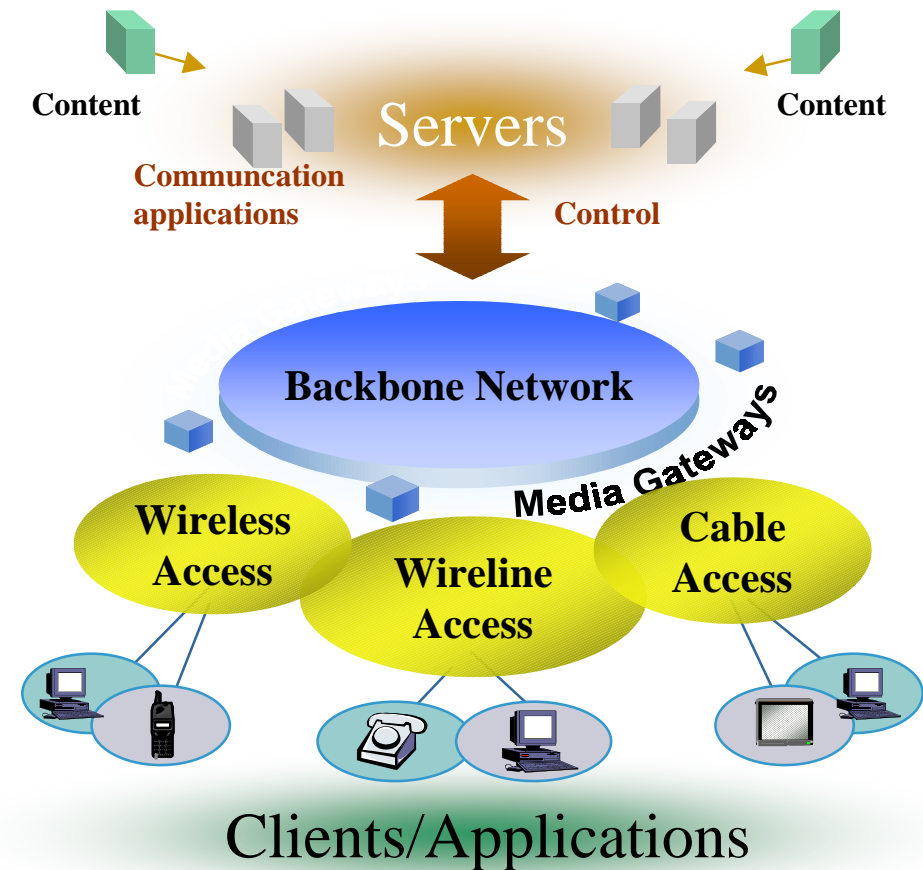

Next-generation Network Structure

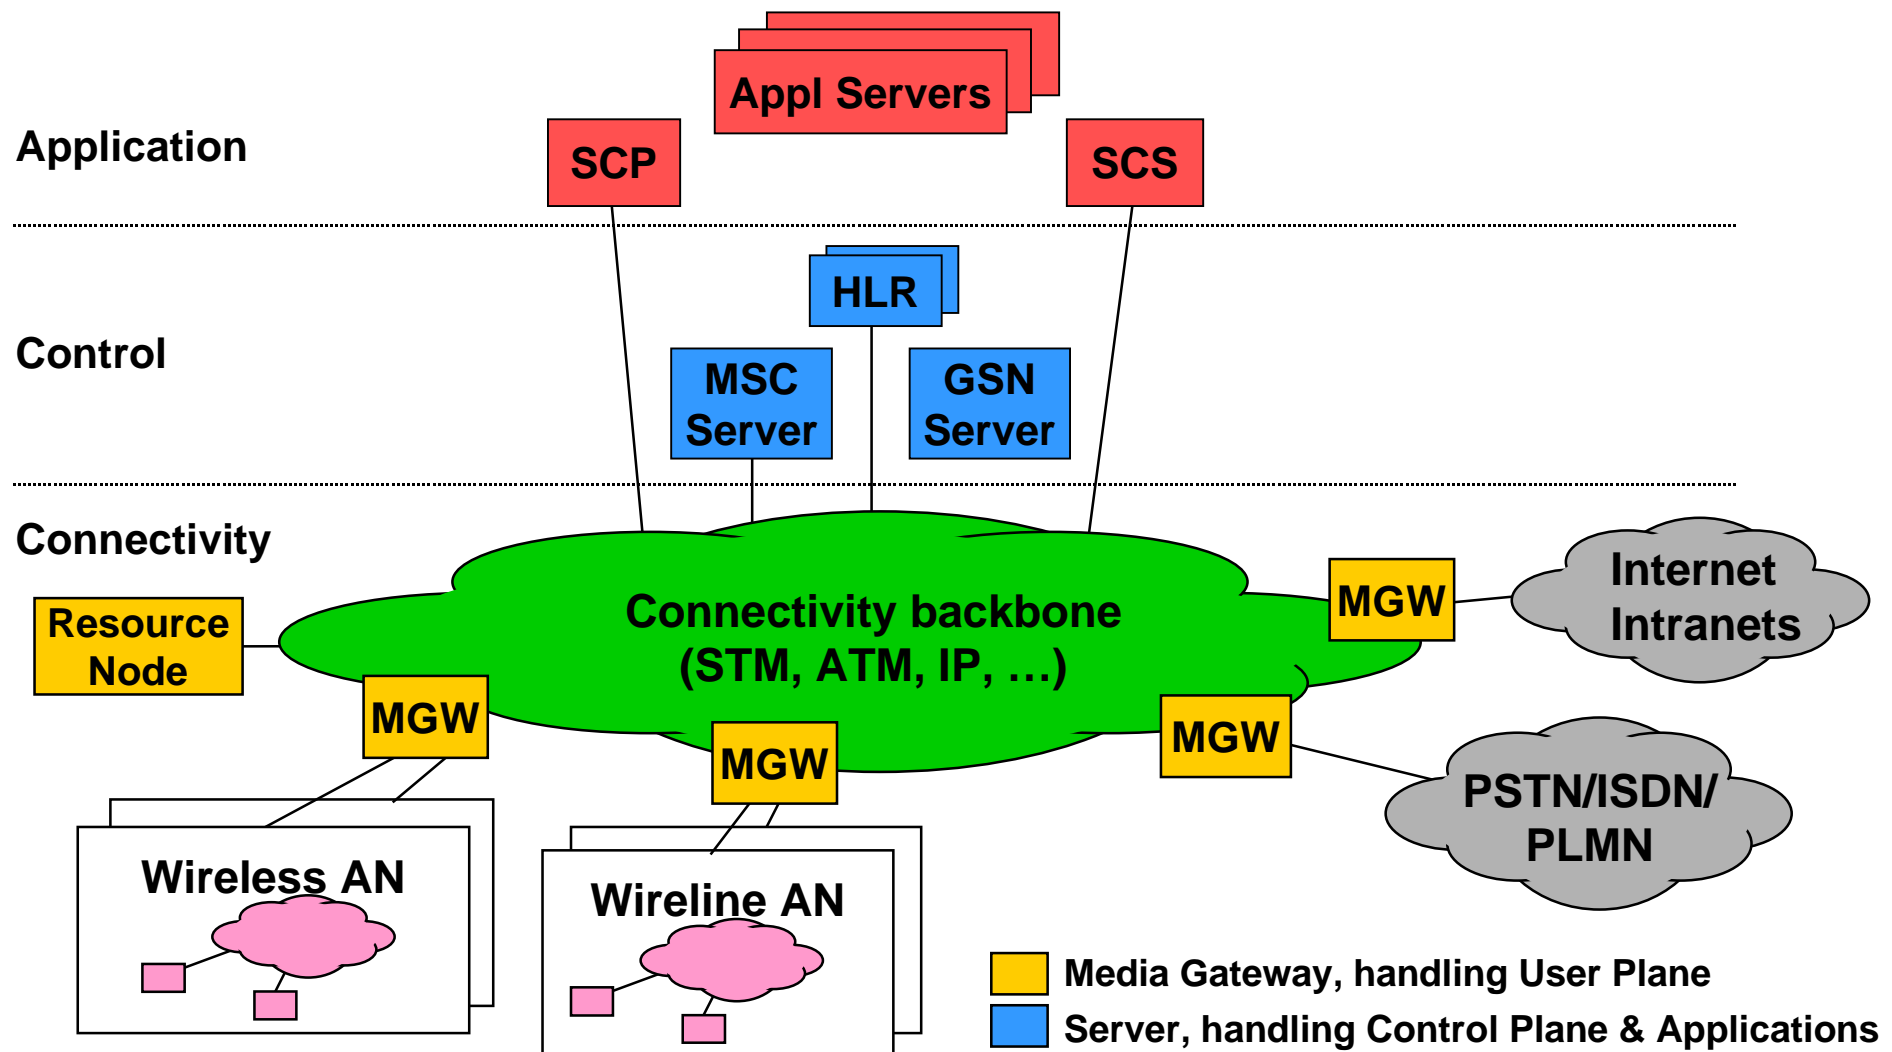

Today Single-service networks

Future Multi-service networks/client-server

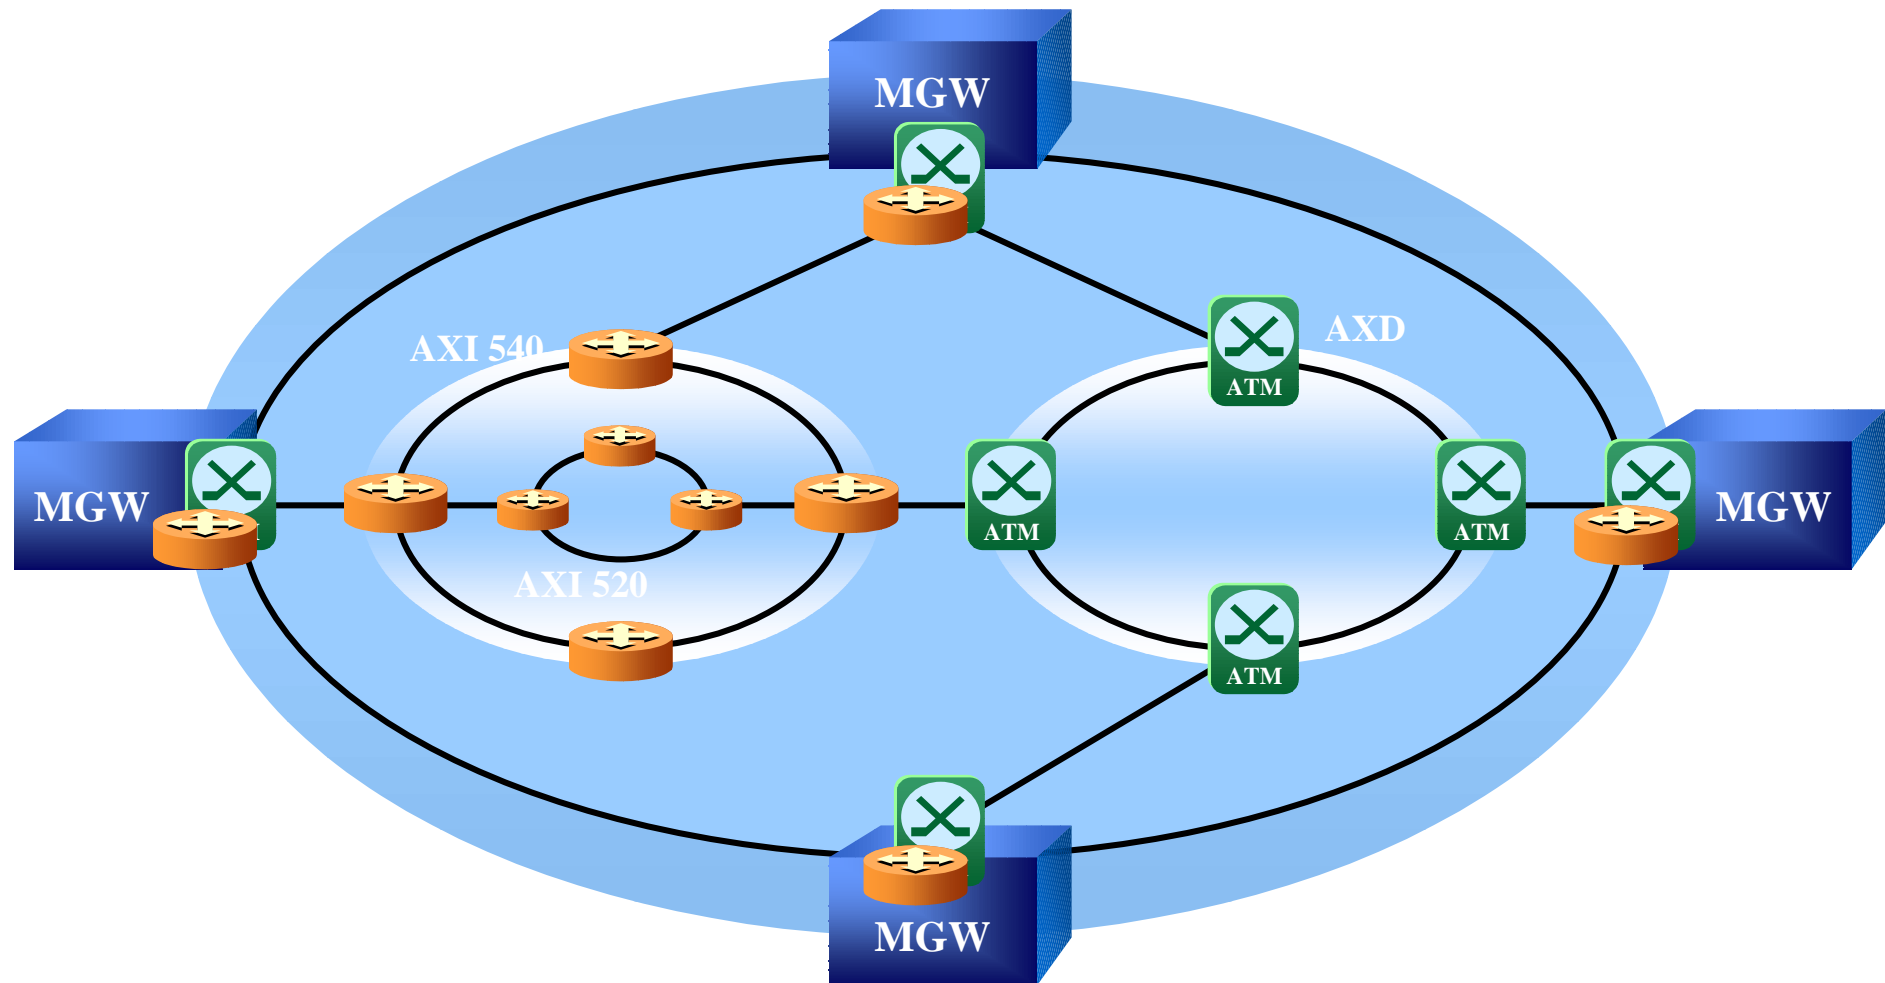

Ericsson Network Architecture

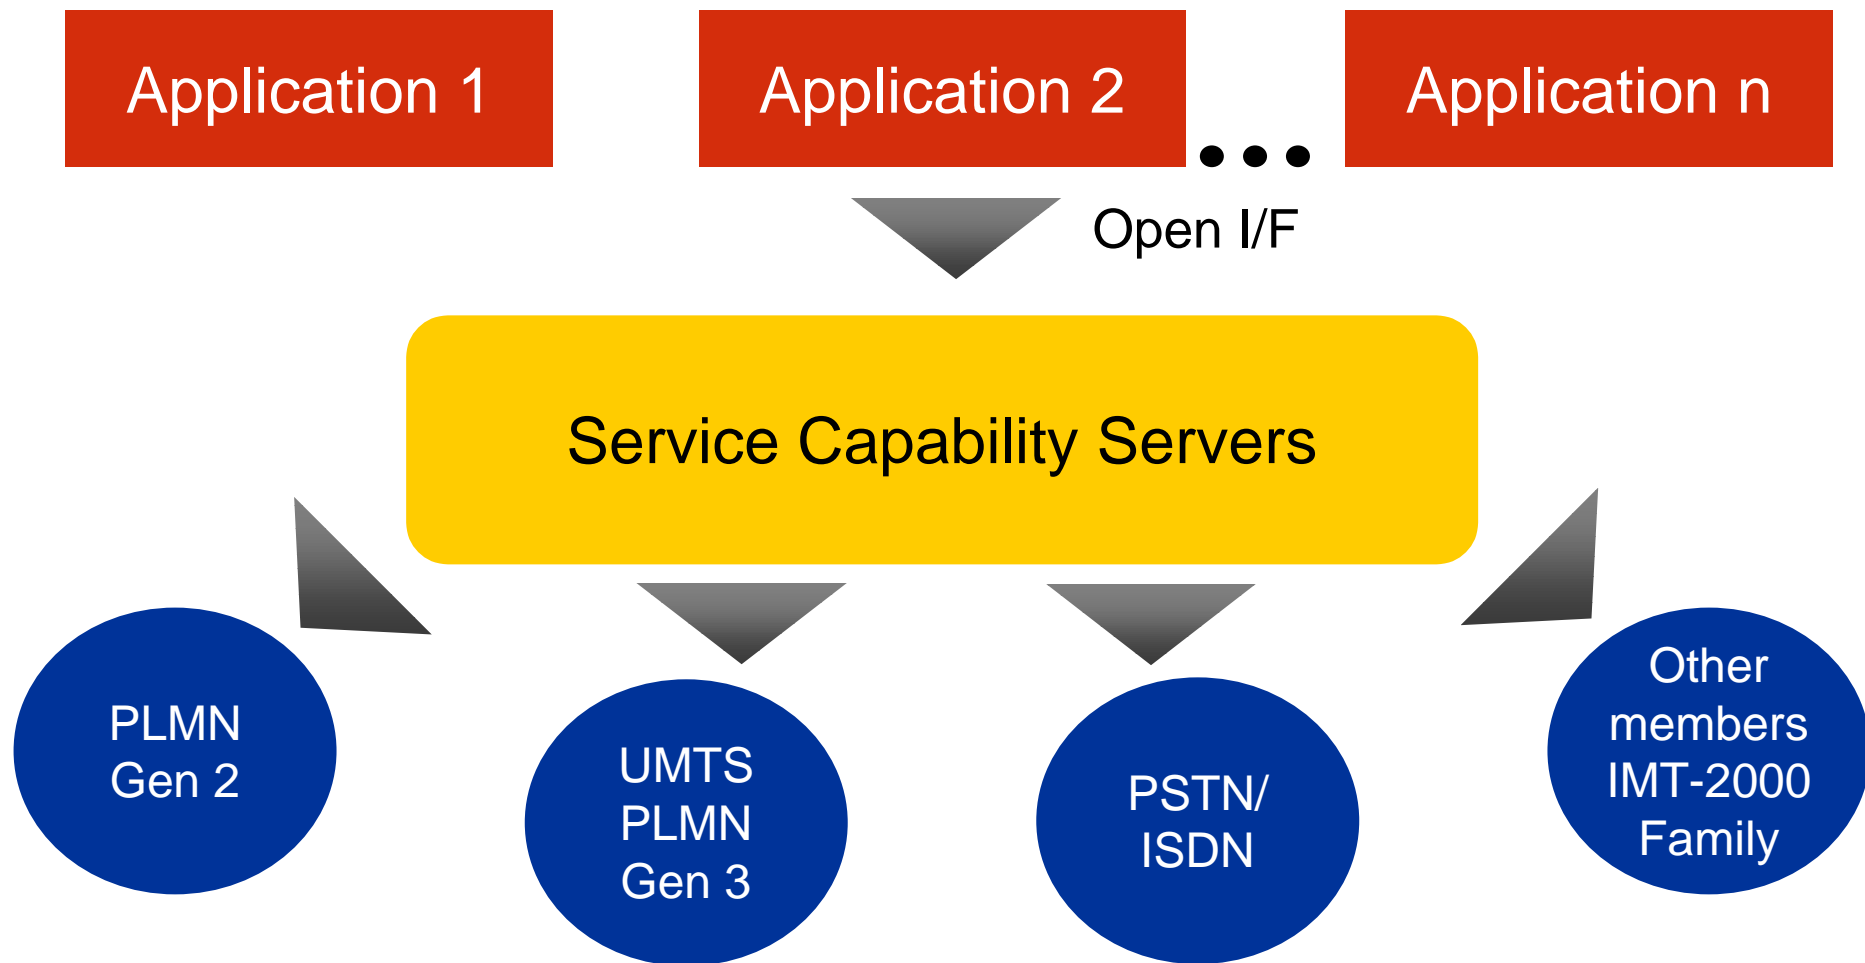

Features of New Architecture:

- Separation of call control and connectivity/bearer control
- Flexible architecture that is possible to use for any connectivity (ATM, IP, STM)
- Keep the N-ISDN/GSM service paradigm. Use MAP, ISUP, etc.
- All devices needed for user plane manipulation are moved to the Media Gateway (echo cancellers, codecs, etc.)
- Possible to place infrequently used equipment in centralized resource nodes
- Transmission efficient to have coded speech all the way to the rim of the PLMN
- UTRAN and the lu interface is ATM based. A good way to bring in ATM in the core network is needed
- Allows stable and mature introduction of UMTS networks since building on GSM products
- New protocol to control media gateway remotely
- Services/applications outside core network enables service convergence
- In line with standardization trends

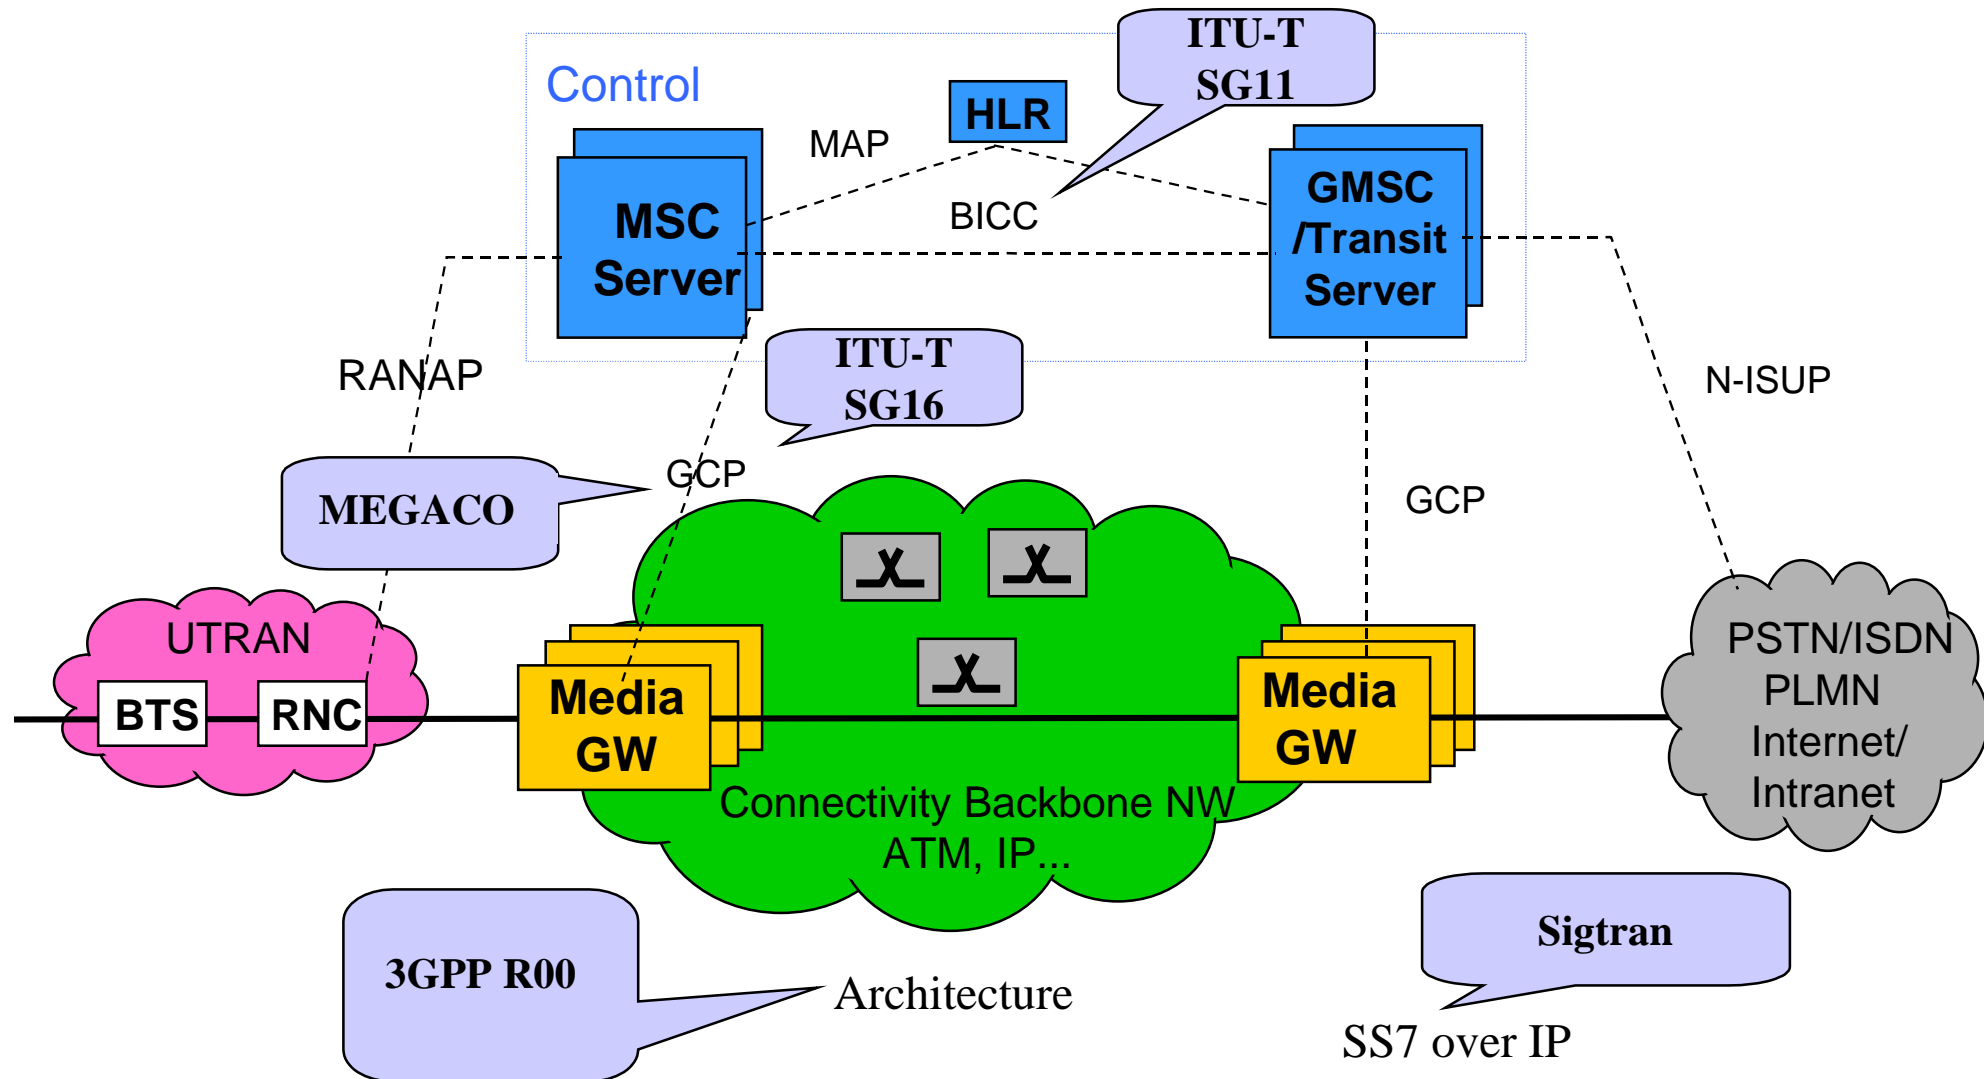

Backbone Network

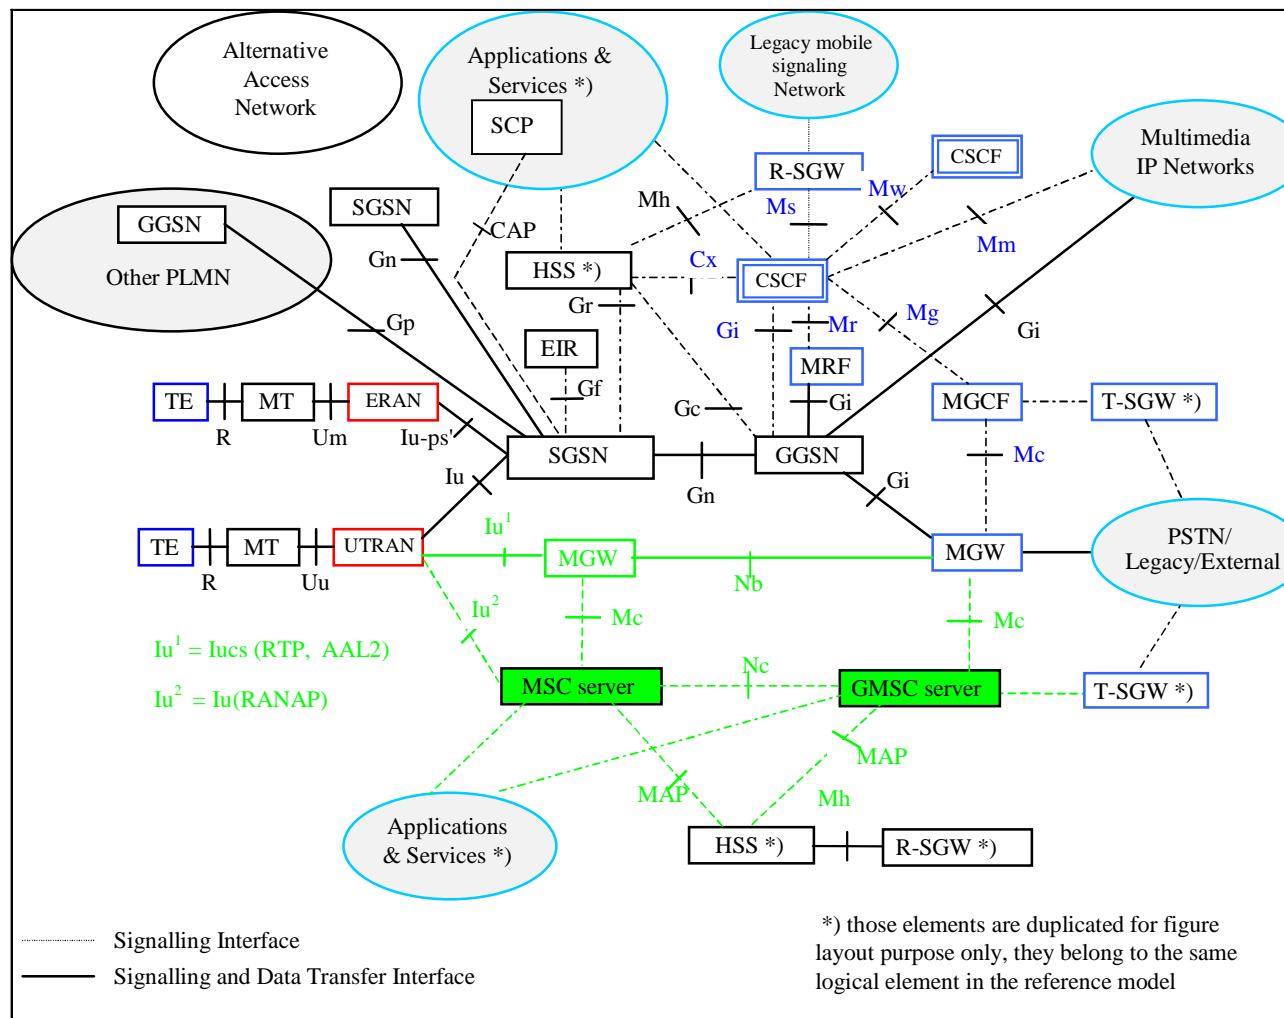

Services/Applications Outside Core Network

UMTS Standardization Bodies for New Architecture

Reference Architecture for an All IP Network

Summary

- Ericsson offers via the layered architecture an evolutionary approach to the multi-service network
- Ericsson offers deployment of ATM & IP-based transport technologies for both UMTS and GSM/GPRS based on open standards.
- A Media Gateway product is introduced handling all user plane data in an integrated way and that connects to ATM & IP backbones
- New network architecture will be included in release 00 of 3GPP
